P&H MinePro Services proudly represent

AmerCable; providing flexible electrical power and control cables for harsh operating environments.

Since the electrification of mines, the core business of AmerCable has been powering mining equipment. Surface or underground – AmerCable has a cable productivity solution for you. The innovatively engineered and manufactured cable lines are designed for your toughest conditions. AmerCable is dedicated to producing cables that last longer in harsh mining environments, designed to help provide greater levels of safety and productivity and at lowest cable cost per tonne.

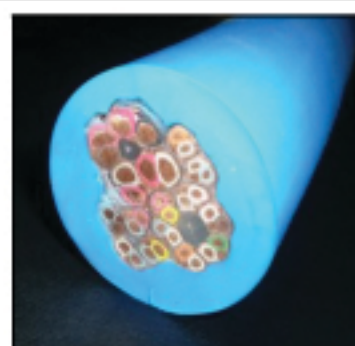

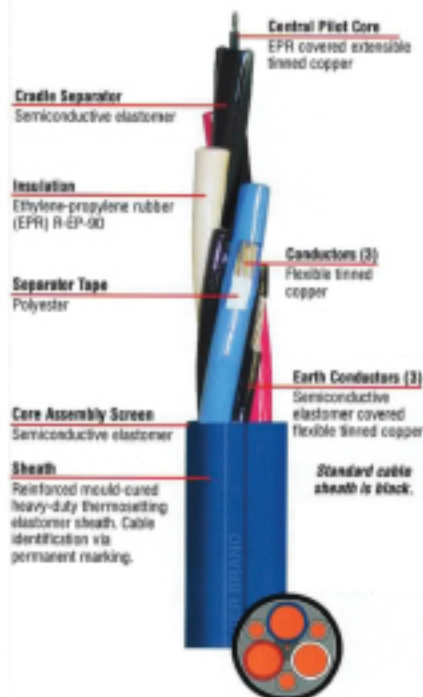

Story courtesy MinePro Website

New Zealand Miners use AmerCable Underground

Solid Energy's Spring Creek Mine chose AmerCable type 275 shuttle car cables for their Greymouth underground coal mine in the South Island.

The harsh environment offers up wet muddy conditions and poor visibility which combines to challenge both equipment, miners and cables.

Composite Cables from AmerCable Australia

The evolution of mining equipment has seen the need for data to enable more extensive Maintenance and Mine planning. AmerCable has developed underground trailing cables with fibre optic components in composite constructions with power, earth and control cable groups.

Whatever your needs for composite construction contact an AmerCable Applications Engineer.
